## AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior listings of claims in the application.

**Listing of Claims:**

1 (CURRENTLY AMENDED):    An image sensing apparatus comprising:

setting means for setting a sensing condition <u>along with sensing time information</u> for <u>an</u> image sensing;

sense means for sensing an image in accordance with the sensing condition <u>along with the sensing time information</u> set by said setting means;

converting means for converting <u>format of the sensing</u> time information ~~of the image sensed at said sense means~~ into text data <u>format</u> for specifying ~~the sensing condition of the image sensed by said sense means~~ <u>the sensing time information with converted text data</u>; and

transmitting means for transmitting, by <u>an</u> electronic mail, ~~the sensing condition and~~ the <u>converted</u> text data ~~converted at said converting means~~ as a part of electronic mail text message when the image was sensed by said sense means,

wherein the converted text data [[is]] <u>are</u> separated from the <u>sensed</u> image, and

wherein said converting means edits the <u>sensed</u> image ~~sensed by said sense means~~ and the <u>converted</u> text data ~~converted by said converting means into the electronic mail, and inserts the text data into the subject of~~ <u>in such a way that the converted text data are represented as a title of</u> the electronic mail.

2 (ORIGINAL):    The apparatus according to claim 1, wherein said transmitting means transmits electronic mail having information indicating the sensing condition added to a message portion.

3 (ORIGINAL): The apparatus according to claim 1, wherein said transmitting means transmits electronic mail having information indicating the sensing condition added to a subject portion.

4 (ORIGINAL): The apparatus according to claim 1, wherein said transmitting means transmits the sensing condition together with the image sensed by said sense means.

5 (ORIGINAL). The apparatus according to claim 1, wherein the sensing condition set by said setting means includes any one of a specific time, a predetermined elapsed time, sensor detection by an external sensor, detection of a sound level higher than a predetermined level, and operation of a sensing button.

6 (ORIGINAL): The apparatus according to claim 1, wherein said transmitting means can transmit image stored in an external memory, and also transmits, when transmitting image stored in the external memory, information indicating that the transmitted image is an image that has been stored in the external memory.

7 (PREVIOUSLY PRESENTED): The apparatus according to claim 1, wherein the time information includes a time at which the image was sensed by said sense means.

8 (ORIGINAL): The apparatus according to claim 1, further comprising transfer means for transferring the image sensed by said sense means to a server connected to a network, wherein said transmitting means transmits link address information for specifying the image transmitted to the server, together with the sensing condition.

9 (CURRENTLY AMENDED): An image sensing apparatus comprising:

setting means for setting a sensing condition along with sensing time information for an image sensing;

sense means for sensing an image in accordance with the sensing condition along with the sensing time information set by said setting means;

converting means for converting format of the sensing time information ~~of the image sensed at said sense means~~ into text data format for specifying ~~the sensing condition of the image sensed by said sense means~~ the sensing time information with converted text data; and

transmitting means for transmitting, by an electronic mail, the converted text data ~~converted at said converting means~~ as a part of electronic mail text message indicating a time at which the image was sensed by said sense means,

wherein the converted text data [[is]] are separated from the sensed image, and

wherein said converting means edits the sensed image ~~sensed by said sense means~~ and the converted text data ~~converted by said converting means into the electronic mail, and inserts the text data into the subject of~~ in such a way that the converted text data are represented as a title of the electronic mail.

10 (CURRENTLY AMENDED):    An image sensing apparatus comprising:

setting means for setting a sensing condition along with sensing time information for an image sensing;

sense means for sensing an image in accordance with the sensing condition along with the sensing time information set by said setting means;

converting means for converting format of the sensing time information ~~of the image sensed at said sense means~~ into text data format for specifying ~~the sensing condition of the image sensed by said sense means~~ the sensing time information with converted text data; and

4

electronic mail creating means for creating ~~an~~ electronic mail to which ~~the sensing condition under which the image was sensed by said sense means and~~ the converted text data ~~converted at said converting means as a part of electronic mail text message~~ are added as a part of electronic mail text message,

wherein the converted text data [[is]] are separated from the sensed image, and

wherein said converting means edits the sensed image ~~sensed by said sense means~~ and the converted text data ~~converted by said converting means into the electronic mail, and inserts the text data into the subject of~~ in such a way that the converted text data are represented as a title of the electronic mail.

11 (CANCELLED).

12 (CURRENTLY AMENDED):     A control method for an image sensing apparatus comprising:

a storing step of storing a sensing condition along with sensing time information for ~~an~~ image sensing;

a sensing step of sensing an image in accordance with the sensing condition along with the sensing time information stored [[in]] at the storing step;

a converting step of converting format of the sensing time information ~~of the image sensed at said sensing step~~ into text data format for specifying ~~the sensing condition of the image sensed by said sense means~~ the sensing time information with converted text data; and

a transmitting step of transmitting, by ~~an~~ electronic mail, ~~the sensing condition and~~ the converted text data ~~converted at said converting step~~ as a part of electronic mail text message when the image was sensed [[in]] at the sensing step,

wherein the converted text data [[is]] <u>are</u> separated from the <u>sensed</u> image, and

wherein said converting ~~means~~ <u>step</u> edits the <u>sensed</u> image ~~sensed by said sense~~

~~means~~ and the <u>converted</u> text data ~~converted by said converting means into the electronic mail,~~

~~and inserts the text data into the subject of~~ <u>in such a way that the converted text data are</u>

<u>represented as a title of</u> the electronic mail.

13 (CURRENTLY AMENDED):     A control method for an image sensing apparatus

comprising:

a storing step of storing a sensing condition <u>along with sensing time information</u>

for <u>an</u> image sensing;

a sensing step of sensing an image in accordance with the sensing condition <u>along</u>

<u>with the sensing time information</u> stored [[in]] <u>at</u> the storing step;

a converting step of converting <u>format of the sensing</u> time information ~~of the~~

~~image sensed at said sensing step~~ into text data <u>format</u> for specifying ~~the sensing condition of the~~

~~image sensed by said sense means~~ <u>the sensing time information with converted text data</u>; and

a transmitting step of transmitting, by <u>an</u> electronic mail, the <u>converted</u> text data

~~converted at said converting step~~ as a part of electronic mail text message indicating a time at

which the image was sensed [[in]] <u>at</u> the sensing step,

wherein the converted text data [[is]] <u>are</u> separated from the <u>sensed</u> image, and

wherein said converting ~~means~~ <u>step</u> edits the <u>sensed</u> image ~~sensed by said sense~~

~~means~~ and the <u>converted</u> text data ~~converted by said converting means into the electronic mail,~~

~~and inserts the text data into the subject of~~ <u>in such a way that the converted text data are</u>

<u>represented as a title of</u> the electronic mail.

14 (CURRENTLY AMENDED):     A control method for an image sensing apparatus

comprising:

a storing step of storing a sensing condition <u>along with sensing time information</u>

for <u>an</u> image sensing;

a sensing step of sensing an image in accordance with the sensing condition <u>along</u>

<u>with the sensing time information</u> stored [[in]] <u>at</u> the storing step;

a converting step of converting <u>format of the sensing</u> time information ~~of the~~

~~image sensed at said sensing step~~ into text data <u>format</u> for specifying ~~the sensing condition of the~~

~~image sensed by said sense means~~ <u>the sensing time information with converted text data</u>; and

an electronic mail creating step of creating <u>an</u> electronic mail to which ~~the sensing~~

~~condition when the image was sensed in the sensing step and~~ the <u>converted</u> text data ~~converted at~~

~~said converting step as a part of electronic mail text message~~ are added <u>as a part of electronic</u>

<u>mail text message</u>,

wherein the converted text data [[is]] <u>are</u> separated from the <u>sensed</u> image, and

wherein said converting ~~means~~ <u>step</u> edits the <u>sensed</u> image ~~sensed by said sense~~

~~means~~ and the <u>converted</u> text data ~~converted by said converting means into the electronic mail,~~

~~and inserts the text data into the subject of~~ <u>in such a way that the converted text data are</u>

<u>represented as a title of</u> the electronic mail.

15 (CANCELLED).
